Where Should Olist Grow Next?

Brazilian marketplace orders | Historical analysis, 2017-2018 | Liang Yao

Avg Delivery Days	Avg Order Value (BRL)	Delivered Orders	Late Delivery Rate	Product Value (BRL)
12.48	R$ 137.00	96,203	8.13%	R$ 13,179,777.95

State Opportunity Ranking

Market Scale vs Delivery Risk

Recommendation

- Core market
- Fix operations first
- Pilot / validate data
- Priority expansion
- Selective expansion / monitor

RECOMMENDED ACTIONS

SP: Defend the core market.

PR and MG: Validate expansion.

RJ and BA: Improve delivery and customer experience before scaling.

DF: Start with a small pilot.

READ THE SCORE WITH CARE

Weights express priorities, not expected profit.

Seller location is a coverage proxy, not capacity.

Low-volume states need more evidence before a large commitment.

KPI scope: Jan 2017-Aug 2018; delivered orders with actual delivery dates. State scope: Jan-Aug 2017 vs Jan-Aug 2018; 16 states with at least 500 orders. Product value excludes freight and is not Olist platform revenue.

Growth & Customer Experience

Demand grew, but growth alone does not establish where expansion will pay off.

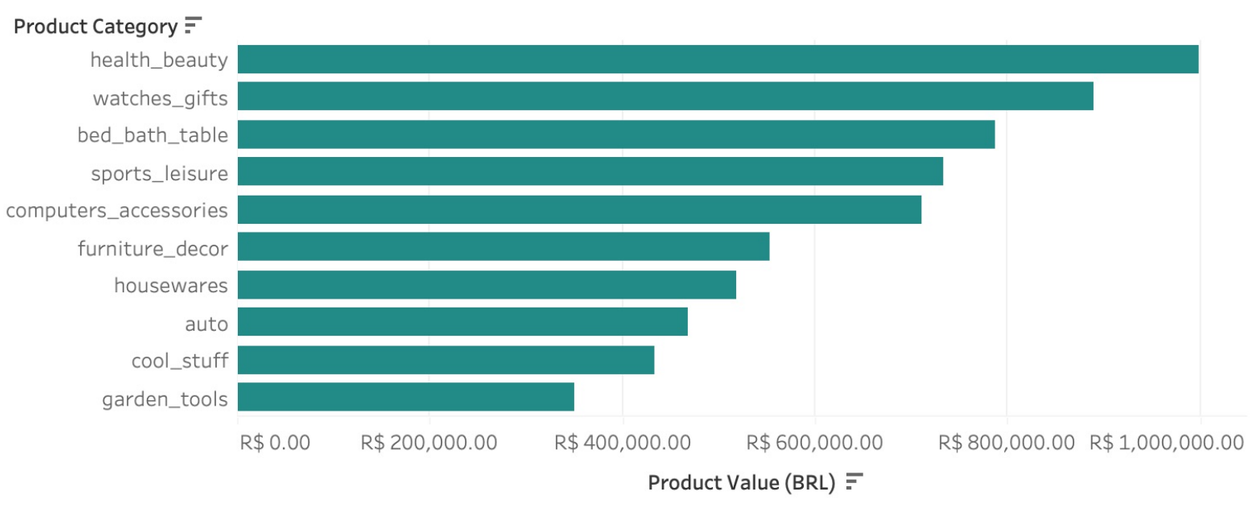

Trend Metric: Delivered orders

Trend Year: All

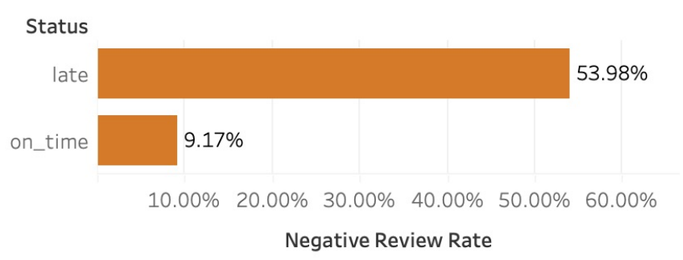

Monthly Delivered Orders and Product Value

Top 10 Categories by Product Value

Late Delivery and Negative Reviews

53.98% of reviewed late orders had a negative review, versus 9.17% of on-time orders.

This association supports investigation; it does not prove that lateness caused the difference.

Monthly trend: all delivered orders purchased Jan 2017-Aug 2018 (96,211 orders; includes 8 missing delivery dates). Category comparison: Jan-Aug in each year; an order can belong to several categories. Reviews: delivered orders with actual delivery dates and matched reviews; negative = mean order review score <= 2. Rates use their own denominators.
